

THE LOANPRO API

REVERSE PAYMENTS

loanprosoftware.simnang.com

API SAMPLE

Fork Reverse Payments — <https://plnkr.co/edit/EbLCFQ>

CAUTIONARY NOTE

The provided API samples store API credentials in the browser

Use the API samples to explore the API and not as your integration

API ENDPOINT

To reverse a payment, you will need the ID of the payment and the associated loan.

Send a POST request to

`https://loanpro.simnang.com/api/public/api/1/Loans(<loan_id>)/VoidPayment(<payment_id>)`

DEFINING THE PAYLOAD

The payload has the following fields:

- reverseReason
 - Reversal collection value that corresponds to the reason for payment reversal
- comments
 - Human-readable information about payment reversal
- __logOnly
 - Determines whether the payment reversal should only be logged in LoanPro, or if the payment should be voided through the payment processor
- nachaReturnCode (optional)
 - Specifies a NACHA return code to send to the payment processor

REVERSE REASON

Reverse reasons can vary from tenant to tenant.

To get your tenant's list, send a GET request to:

[https://loanpro.simnang.com/api/public/api/1/collections\(payment.reverse\)/items](https://loanpro.simnang.com/api/public/api/1/collections(payment.reverse)/items)

NACHA RETURN CODES

The list of all NACHA return codes recognized by the API are in the article:

[API NACHA Return Codes](#)

REVERSING PAYMENTS IN PCI WALLET

Payments which are processed by a payment processor should be reversed in LoanPro and not PCI Wallet

To do this, include the "nachaReturnCode" property with a valid code and set "__logOnly" to false
